SUBJECT INDEX TO VOLUME 25

Convection from a plate in a porous medium, 317
Convection in an array of stacked plates, 393
Convection in an enclosure of porous medium, 671
Convection in a horizontal semicircular duct, 171
  adiabatic curved wall, 176
  isothermal curved wall, 182
Convection over nonisothermal horizontal surfaces, 685
Crossflow heat exchangers, thermal response of, 223

Different heating methods, comparison of, 409

Forced convection in a cusped duct, 743
Freeze coating on two-dimensional freezing plate, 279

Heat transfer augmentation in a channel, 519
Heat transfer enhancement using eddy promoters, 117
  governing equations, 121
  numerical solution technique, 122
  grid generation, 123
  electromagnetic melting and evaporation, 135
Heat transfer from a corrugated plate, 331
Heat transfer inside enhanced tubes, 721

Laminar flow past cavities, 85
  experimental results, 86
  governing equations, 88
  numerical solution technique, 89
  numerical boundary conditions, 91
  convergence criteria, 91

Mean and flow equations, 238
Melting of ice in a porous layer, 559
Melting of unfixed phase-change material, 191
  formulation, 193
Mixed convection from a rotating cone, 75
Moving boundary problem in a composite medium, 209
  problem formulation, 211
Multidimensional droplet evaporation modeling, 151
  physical problem and transport equations, 153
  numerical solution procedure, 155
  significance of dimensionless numbers, 186
  evaluation of scheme performance, 157
  finite difference schemes, 158

Natural convection around a circular cylinder, 443
Natural convection between concentric cylinders, 103
Natural convection in a cylindrical enclosure, 363
Natural convection in a vertical annulus, 461
Natural convection in enclosures, 575
Natural convection in inclined enclosures, 295
Natural convection in vertical parallel plates, 479
Numerical modeling of a nucleate boiling surface, 703
Numerical simulation of film cooling, 237

Optimal spacing of parallel boards, 373
Oscillatory instability of buoyancy convection, 627

Partition attached to heat square cavity, 611
Power law fluid in a vertical duct, 57
  numerical scheme, 63

Spray-combusting flows, 1
  gas phase equations, 3
  turbulence models, 3
  combustion model, 5
  droplet phase equations, 5

turbulence/droplet interactions, 6
droplet/wall impingement, 6
Spray-combusting flows, fast transient, 21
gas phase equations, 23

Temperature gradient metamorphism in dry snow, 259
theoretical formulation, 263
Thermocapillary convection around bubbles, 501
Transient laminar freezing or liquids, 428
Transient natural convection in a square cavity, 595
Turbulence structures in rod bundle subchannels, 649
Twin-screw extruder, transport in a, 541

Viscosity effects on the vortex instability, 497

Wind-induced entrainment, 43
